

SAPPHIRE

> DESIGN	NEWCUISE - Yacht Projects & Design
> SHIPYARD	Nobiskrug
> BEAM	12.5
> MAX SPEED	17
> CRUISING SPEED	15

Completed in time for the busy superyacht summer, comes the stunning new 73.5 m/ 242 ft SAPHIRE delivered to her new owners in April of this year. A masterpiece that combines the talents of designers and naval architects Frank E. H. Neubelt and Roland Krueger with the interior architecture of Katharina Raczek, all from the German design – house NEWCRUISE.

A great deal of attention has been taken in the design of the exceptional outdoor illumination. Sapphire excites with an exquisite and stunning 'Night-Time Look' highlighting her lines and her furniture while she literally floats on a bed of light courtesy of her underwater array.

NEWCUISE follows their in-house design philosophy of well balanced inside – outside design themes which reflect a real masterpiece full of character in all aspects from the Interior to the Exterior and back.

The very carefully created arrangement plan offers a full-width owners apartment plus four amazing guest cabins, a beach club, an upper deck superior cabin, a sky lounge and a cinema.

Modernism inspired by Art Deco describes the interior styling which displays clean and pure lines underlined by very strong light and dark contrasts and very elaborate details reflected in all aspects of the interior, furnishing and accessories. The muted schemes reflect the palette of clear and mellowed blue tones, which are a tribute to the name of the yacht.

Special attention was given to the development of her hull lines and naval architecture and the careful matching of equipment to give her a comfortable cruise speed of 15 knots and maximum speed of 17 knots powered by twin 2,360hp MTU diesel engines with a range of over 5,000 nautical miles. She is equipped with zero speed stabilisers and contains large tender garages on port and starboard.

IBM电子商务创新中心主要为营销中心和协作中心。通过设计为期一天的技术教育体验项目传递和增强IBM电子商务中心分支的核心价值观。该中心的设施可使得公司根据自身的需要进行战略制定、开发、实施和基于网络的电子商务解决方案的管理。通过融合建筑、媒体和“智能”技术，设计师设计了中心的所有外观和理念。该建筑为空间和时间创造了可行性条件。环境灵活多变，可随时间变化。无论从网络架构到物理架构都可扩展和升级。空间随时开放，使得环境容易进入，同时更容易与客户融合。墙壁和隔板优雅亮丽，滑动和旋转精准，使得那些或多或少需求隐私和定制材料的空间通过透明度和层次感增强连续性和空间的延伸。

客户在每天开放时配备一个个性的“智能物体”，通过传感器为客户定制内容，同时允许IBM公司在客户体验之前、体验期间和体验之后维持该个性化连接。“交互台”是主要的协作工具；传统会议桌的新模型使得客户在进行不同层次的合作对话时可以交互使用，操控数字模拟项目。客户与IBM主题专家可以在正式区与非正式区共同工作，并配备有声传感器、语音识别、触摸屏。新媒体技术使得环境互动、信息丰富，鼓励客户创新。
